Moayyad Faris

VP of Engineering at Startappz

Summary

Interested primarily in making people the best at what they can be.
Always looking for interesting problems to solve.

Specializing in solving out-of-the-ordinary problems and optimizing
even the most ordinary solutions.

Scrum, Kanban, and agile methodologies.

Experience

Startappz
2 years 6 months

VP of Engineering
October 2017 - Present
Amman Governorate, Jordan

Providing overall strategy and technology direction for the development of
applications and
communication infrastructure supporting the Company's solutions

Strategic planning for all product development efforts to include the
subsequent testing, release and production environment needs

Overseeing all activities of the development groups (development, QA, and
application release)

Perform as member of a high performance team and provide solutions
architecture and supporting business oriented project development efforts.

Assuming overall responsibility for the current and long range direction of
technology for both internal and SaaS-based solutions by enhancing and
implementing best-in-class programs, policies, practices and systems while
delivering high quality and repeatable results

Supporting the development of the Company's product roadmap

Leading and enhancing our agile methodology for the design, development, test and
release of our products and features.

Being an active spokesperson and evangelist both internally and externally by communicating and promoting the Company's technology vision and solutions

Ensuring the knowledge sharing of engineering best practices across departments; and
developing and monitoring technical standards to ensure adherence to them.

Back End Developer Team Lead
October 2016 - October 2017 (1 year 1 month)
Amman Governorate, Jordan

Distill product requirements into technical solutions, architecture, timeline, and schedule

Deliver stable, well-tested solutions on time, delegating where appropriate

Provide clear technical direction and advocate for improvement while minimizing downtime and risk

Adapt to technical change with agility by proposing creative and thoughtful alternatives

Work heavily with teams to communicate, influence and determine our technology roadmap

Build out our modern web architecture

Develop, support, and improve internal frameworks, systems, and tools

Own web development projects from the backend to the presentation layer

Implement data collection and storage architectures to support our voracious appetite for data and data-driven insights

Work through technical challenges
